EDUCATION

B.Sc. in Computer Science Artificial intelligence

Abdul Wali Khan University, Mardan — Jun-1, 2026

CGPA: 3.66

Key Courses: Data Structures, Databases, AI, Knowledge Representation and Reasoning, Artificial neural network, Machine learning, Deep learning, Computer vision

TECHNICAL SKILLS

Languages: Python, dart, JavaScript, TypeScript

Web: HTML, CSS, JavaScript, Flutter

Tools: Git, VS Code, Linux, MySQL, Android studio

AI: Natural language processing, Machine Learning, Reinforcement Learning, Computer Vision

PROJECTS

Student Council Management System (Flutter, Firebase, Hackathon)

Build a Role base Management system where every role has been given by authorities according to their role.

Role: Provost, deputy-provost, President, member

ERP Management System (Flutter, Firebase)

Created a management app for Marble factory. It includes managing Inventory, Reports, Dashboard etc.

Management System Hostlers (Flutter, Firebase)

Created a management app for Hostlers, where they can keep track the money including debt on them, receivables from other and Dashboard.

Chat Bot (Python, PyQt5)

Built a simple Desktop base chat Bot using **llama3 base model** (local model, do not need any internet connection). UI is built using PyQt5 tool. This project is still in progress.

Spam Text Detector (Python, PyQt5)

I have built a Spam mail detector by fine-tuning an **NLP Roberta model** which is provided by google. I have **fine-tuned** the model with data set of size 5000 spam messages.

Face Recognition (Python, Flask, Html, CSS, JavaScript)

Built a simple web which detects face and shows the confidence level of the model.

Digit Recognition using camera and Black bord (Python, Flask, Html, CSS, JavaScript)

Built a simple web which detect digit from **live camera** (Digit range 0-9), this website also has a **black bord** where user write digit and the model detect the digit.

Multi-Models for Cancer Detection (Python, ML, DL, CV, Hackathon)

Built a multi-model system for cancer detection from microscopic images, gene expression and other important clinical data.

CERTIFICATIONS FROM COURSERA BY DEEPLARNING.AI

Mathematics for Machine Learning and Data Science – Specialization – Aug 12, 2023

Programming with JavaScript – Course – Mar 5, 2024

Machine Learning – Specialization – Sep 5, 2024

Deep Learning – Specialization – Nov 24, 2024

Natural Language Processing – Specialization – Jan 12, 2025

TensorFlow Advance Technique – Specialization – Apr 23, 2025

Flutter & Dart: SOLID Principles and Top Design Patterns – Course – Nov 12, 2025 – From Udemy

ACTIVITIES

Winner, ByteSprint 2025, Hackathon

Participants, NeoHacks 2025, Hackathon

Health Intelligence and Diffusion models, GIKI 2025, Workshop

DNA Day, CECOS 2025, Workshop

Runner-up, SoftCom 2024, Speed programming

Participants, Hi-Tech 2025, Speed Programming
